

PERSONNAL STATEMENT

Growing up I was brought up to believe that I could be anything and anyone I wanted to be, the endless possibilities were immensely thrilling.

At first I was a beautiful singer, after a while I became an engineer, eventually I became a computer scientist, with a passion for programming and mathematics.

Early on, during my primary education through to junior high school, I found that I had strengths both in the sciences and engineering. I loved my physics and chemistry classes, I loved going to the computer lab during my break periods to play around with the computers there.

When I was to move on to the tertiary institution I was turn between studying mechanical or electrical engineering, until a friend of mine told me about computer science.

My first decision to study Computer Science was born out of the desire to develop and challenge my mind and myself as a person to provide solutions in this digital age.

The four years I recently spent, studying Computer Science, in Covenant University, Nigeria. Ignited my passion to gain a knowledge of information system and how they can benefit the world at large. With the little knowledge I have acquired, I have been able to apply them in some little pet projects designing various software applications ranging from the web to desktop apps, to develop my skills as a programmer and mathematician.

There is a deep yearning within me, to care for and provide solutions with the help of technology to better the lives of as many people as I can, and I refuse to turn away from that, which is why I made the choice to go to a school that presents me with an opportunity to groom me into a professional software engineer with accurate information technology knowledge and when and how to apply this knowledge.

It is my belief that Coventry University possesses the facilities and proper learning culture and environment to develop me mentally, physically, emotionally and socially to become a great and inspiring scientist, that is dedicated ,compassionate and highly competent, to meet the needs of this ever growing digital world and system in any organization. I look forward to growing in and with Coventry University.
